Simplify Security Operations and Compliance

The digitization of society has brought cybersecurity to the forefront of executives' and boards' minds. Rapid adoption of technology has increased both the amount of data to protect and the available attack surface. As a result, breaches have become more public and costly for the enterprise. Laws and regulations are catching up, placing new, more stringent compliance requirements on organizations. These factors have led to a severe shortage in cybersecurity talent, leaving organizations struggling to identify, hire and retain people with the skills necessary to protect the enterprise.

Protection of critical information requires a holistic, comprehensive and integrated security strategy underpinned by automation, machine learning and advanced analytics. MSP1 supports this strategy with a combination of leading technology, services and analytics that streamline client security operations to improve visibility and create a defensible position for the board.

Security Information and Event Management

IT organizations struggle to make effective use of disparate reports from a myriad of security technologies and vendors. Designed to address an always changing landscape of cyber threats and security technologies, MSP1 Security Information and Event Management (SIEM) Solutions arm our clients with a powerful arsenal of high-performance tools for correlating and simplifying security, compliance and operations. MSP1 SIEM Solutions deliver comprehensive, useful and actionable insight into what is really going on in and around an enterprise IT environment.

We leverage best-in-class LTS Secure SIEM technology to operationalize cross-platform, enterprise-wide monitoring, detection and response protection by unifying security information and providing:

- Log Collection: Collecting security event log, machine and forensic sensor data
- (host and network).
- Security Event Monitoring: Monitoring collected data for those events that need further investigation, utilizing machine analytics and SOC analyst capabilities.
- Security Analytics: Analyzing data and assessing threats to determine risks and if a full investigation is necessary.
- Security Incidents Investigation: For incidents requiring further investigation, finding indicators of compromise (IoC), analyzing the threat and determining the nature and extent of the incident.
- Security Incident Response: Sending notifications and providing associated information on how to mitigate the threat and associated risk by implementing suitable countermeasures.
- Security Automation: Leveraging LTS Secure Orchestration and Automation to automate appropriate tasks in your environment, improving security efficiency and effectiveness.
- Transition Services: Conducting specialized workshops and discussions to identify and address pain points

MSP1 Security Solutions Advantage

Full breadth and depth of integrated security services, including incident response, governance, online risk management, compliance, SIEM, advanced endpoint protection, security device management, vulnerability management and identity and access management.

Integration with MSP1 services, simplifying your IT outsourcing model and helping you operationalize security.

Actionable steps based on nextgeneration technologies and the latest security solutions to protect you against emerging threats.

Security Operations Center to manage, monitor and respond to your cybersecurity needs 24x7, freeing you from operational hassles.

Flexible solutions, based upon your specific needs such as on-site delivery, remote delivery or a combination of both.

MSP1 Expertise

MSP1 is committed to your security excellence. As an IT Operations company, we understand the complexities that exist in unlocking the value promise of leading-edge technology. In supporting organizations as a trusted partner, we focus not only on 24x7 quality operations support, but on improving security capabilities quarter over quarter.

Our team of experienced consultants and analysts helps organizations achieve maximum return on their technology investments, removing the complexity of having to hire and retain niche skillsets.

MSP1 takes a data driven, advanced analytics approach to security, leveraging insights to optimize leading practices and security technology configurations for our client's environments.
