

Real-time 24x7 monitoring, advanced analysis, and better visibility through customized reports and dashboards to proactively prevent, detect, and address security threats.

Services

- Log management and monitoring: MSP1 offers log collection and round-the-clock vigilant event log monitoring, to help early detection and meet regulatory compliance and forensics requirements.
- Threat detection: Our services include advanced security analytics with contextual analysis powered by large data analytic platform using threat intelligence services.
- Incident response services: An onsite or remote incident responder will work with your IT and business team to help contain and mitigate threats with complete damage assessment and response planning capabilities.
- Malware analysis and forensics: During critical investigations, you can choose to engage with our digital forensics lab that supports malware analysis for unknown or zero-day malware.
- Service management and reporting: You can use our portal to report incidents and raise service requests, and our SOC analysts will work with you to ensure quick issue resolution. You can track ticket status, severity and work logs, including recommendations and actions already taken by the SOC team. You can also view specialized reports (generated daily, weekly, or monthly) on the top infected systems, failed login attempts, top alert sources, top attackers, and so on.
- Extensive vulnerability management: MSP1 offers a cyclic approach (monitor-assess-prioritize-prevent-fix) for thorough vulnerability management. Integration with vulnerability assessment scanner feeds helps generate timely alerts. Vulnerability management services help detect configuration compliance deviations from baseline security standards.
- Threat intelligence services: Our team aggregates and correlates thousands of security events using a multi-tenanted security information and event management (SIEM) environment and threat feeds. You can access threat advisory reports to gain a quick overview of critical and high vulnerabilities and recent malware attacks.

With cyber security attacks becoming not just common, but inevitable, enterprises need to be adequately armed to neutralize both existing and potential vulnerabilities.

Benefits

- An integrated security framework: With consolidated security options for vulnerability management, threat feed, forensic analysis, malware analysis, and so on, you can make better security decisions with intelligence-driven analytics.
- Compliance: We provide compliance and audit reports for SOX, PCI, HIPAA and other regulatory requirements.
- Effective monitoring and visibility: We enable quick and easy access to real-time reports, giving you a comprehensive, in-depth view of your organization's security issues and vulnerabilities.
- Cost efficiency: By leveraging and optimizing your investments in tools and technology, or our hosted platform, we can address security requirements in a cost-optimal manner.
- Service quality and responsive delivery: Our commitment to quality standards, customer centric service delivery, and SLA-governed deliverables ensure complete transparency and quality.
- Flexible options: You can choose a service plan that matches your enterprise's requirements. We support legacy and home-grown applications as well.

Our Advantage

- Domain expertise: Get access to a team of security professionals with extensive experience in cybersecurity. Our performance is driven by metrics and service level agreements (SLAs) to ensure tangible outcomes.
- Delivery model: Based on ITIL, we deliver consistent round-the-clock support at lower cost.
- Research-backed solutions: With defined area of expertise and Centre of Excellence (CoEs) each focused on one specific security area, MSP1 experts constantly research emerging threats and vulnerabilities to help secure your assets.
